

FEATURES

- 4.5V~5.5V Supply, Full-Duplex
- Fail-Safe
- 1/8 Unit Load, Allow Up to 256 Transceivers on the Bus
- Driver Short-Circuit Output Protection
- Receiver Open Circuit Failure Protection;
- Strong Anti-Noise Ability
- Integrated Transient Voltage Suppression Function
- The Data Transmission Rate Up to 12Mbps in Electric Noise Environment
- ESD Protection for RS-485 I/O Pins $\pm 15\text{kV}$, Human Body Model

DESCRIPTION

SIT491E is a 4.5V~5.5V powered, full-duplex, low power dissipation RS-485 transceiver fully meeting the requirements of RS-485 & RS-422 standard.

SIT491E contains one driver and one receiver, both can transmit signals independently. The SIT491E has a 1/8-unit-load. It allows up to 256 transceivers on the bus and error-free data transmission up to 12Mbps.

SIT491E has a working voltage range of 4.5V~5.5V, with the functions of Current-Limiting Protection, Over-voltage Protection, Control Port Hot Plug Input, etc.

SIT491E has excellent ESD release capability, and HBM reaches $\pm 15\text{kV}$.

**LIMITING VALUES**

PARAMETER	SYMBOL	VALUE	UNIT
Supply voltage	VCC	+7	V
Driver Input Voltage	DI	-0.3~VCC+0.3	V
Receiver Input Voltage	A、B	-8~13	V
Receiver Output Voltage	RO	-0.3~VCC+0.3	V
Operating Temperature Ranges		-40~125	°C
Storage Temperature Range		-60~150	°C
Lead Temperature		300	°C
Continuous Power Dissipation	SOP14	600	mW
	DIP14	700	mW

The maximum limit parameters means that exceeding these values may cause irreversible damage to the device. Under these conditions, it is not conducive to the normal operation of the device. The continuous operation of the device at the maximum allowable rating may affect the reliability of the device. The reference point for all voltages is ground

PINNING

PIN	SYMBOL	DESCRIPTION
1	NC	No Connection.Not internally connected
2	RO	Receiver Output. When /RE is low, If A-B \geq -10mV, RO will be high; If A-B \leq -200mV, RO will be low
3	/RE	Receiver Output Enable. RO is enabled when /RE is low; RO is high impedance when /RE is high. If /RE is high and DE is low, the device will enter a low-power shutdown mode.
4	DE	Driver Output Enable. The driver outputs are enabled by bringing DE high.They are high impedance when DE is low. If /RE is high and DE is low, the device will enter a low-power shutdown mode.
5	DI	Driver Input. When DE is high,A low on DI forces output A low and output B high. Similarly,a high on DI forces output A high and output B low.

6	GND	Ground
7	GND	Ground
8	NC	No Connection.Not internally connected
9	Y	Non-inverting Driver Output
10	Z	Inverting Driver Output
11	B	Inverting Receiver Input
12	A	Non-inverting Receiver Input
13	VCC	Positive Supply or No Connection
14	VCC	Positive Supply.

ADDITIONAL DESCRIPTION

1 Sketch

SIT491E is a full-duplex high-speed transceiver for RS-485/RS-422 communication, which includes a driver and a receiver. It has failure safety, over-voltage protection and over-current protection. SIT491E realizes error-free data transmission up to 12Mbps.

2 Fail safe

When the receiver inputs are shorted or open, or when they are connected to a terminated transmission line with all drivers disabled, SIT491E guarantees a logic-high receiver output. This is done by the receiver input thresholds are set between -10mV and -200mV. If the differential receiver input voltage ($A-B$) $\geq -10mV$, RO is logic high; if the voltage ($A-B$) $\leq -200mV$, RO is logic low. With the receiver threshold of the SIT491E, this results in a logic-high with a 30mV minimum noise margin. The -10mV to -200mV threshold complies with the $\pm 200mV$ EIA/TIA-485 standard.

3 Allowing up to 256 transceivers on the bus

The input impedance of the standard RS485 receiver is $12k\Omega$ (1 unit load), and the standard driver can drive up to 32 unit loads. The receiver of SIT491E transceiver has $1/8$ unit load input impedance ($96k\Omega$), which allows up to 256 transceivers to be connected on the same communication bus in parallel. These devices can be combined arbitrarily or with other RS485 transceivers. Any combination of these devices and/or other RS-485 transceivers with a total of 32 unit loads or less can be connected to the line.

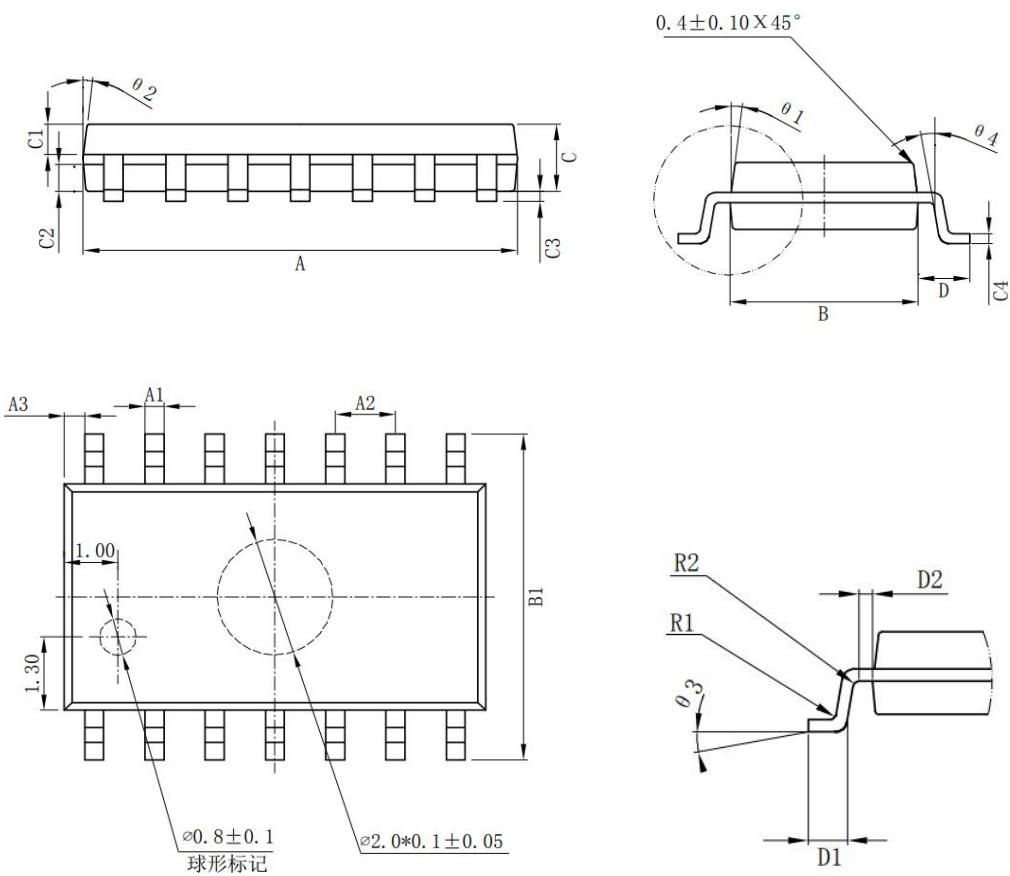

4 Driver output protection

By means of over-current and over-voltage protection mechanism, it can prevent excessive output current and power dissipation caused by faults or by bus contention, and fast short-circuit protection can be provided in the whole common mode voltage range (refer to typical working characteristics).
